Problem Statement

Phosphoric Acid is the degumming agent used by all SD Refineries. The **Dosage** for **Phosphoric Acid** on **Monthly Average** is at **0.084%** at Sime Darby Austral vs target 0.06% as per industrial standard. This process will determine the final quality of the refined oil produced. Tuning the dosage of the Phosphoric Acid will help to reduce the processing cost and boost up the quality of the Refined Bleached deodorized Palm Oil (RBDPO).

***Replication** to other **13 SD Refineries** will be subjected to the success of this project.

Our Ultimate Aim (Project Title)

"To reduce the Monthly Average consumption of Phosphoric Acid in Degumming Process at SD Austral from baseline 0.084% to 0.058% through process optimization by July 2015"

Initial Potential Benefits
RM 290,000

Following is the example to calculate for the saving of 1 SD Refineries:

SD Austral
SAVING = [(Total forecast acid volume for SD Austral) x (The average FY13/14 acid price for SD Austral)] - [(Total forecast of new acid volume for SD Austral) x (The new acid price for SD Austral)]

Average consumption of Phosphoric Acid
at **0.058%** was set as the **TARGET** for this project as agreed by the management.

Refining ---→ WHY

Customer Expectation

- Improve flavor and colour
- Odor elimination

Nutrition Requirement

- Remove harmful impurities
- Retains valuable vitamins

Improve Shelf Life

- Increase oxidative stability

Improve Performance

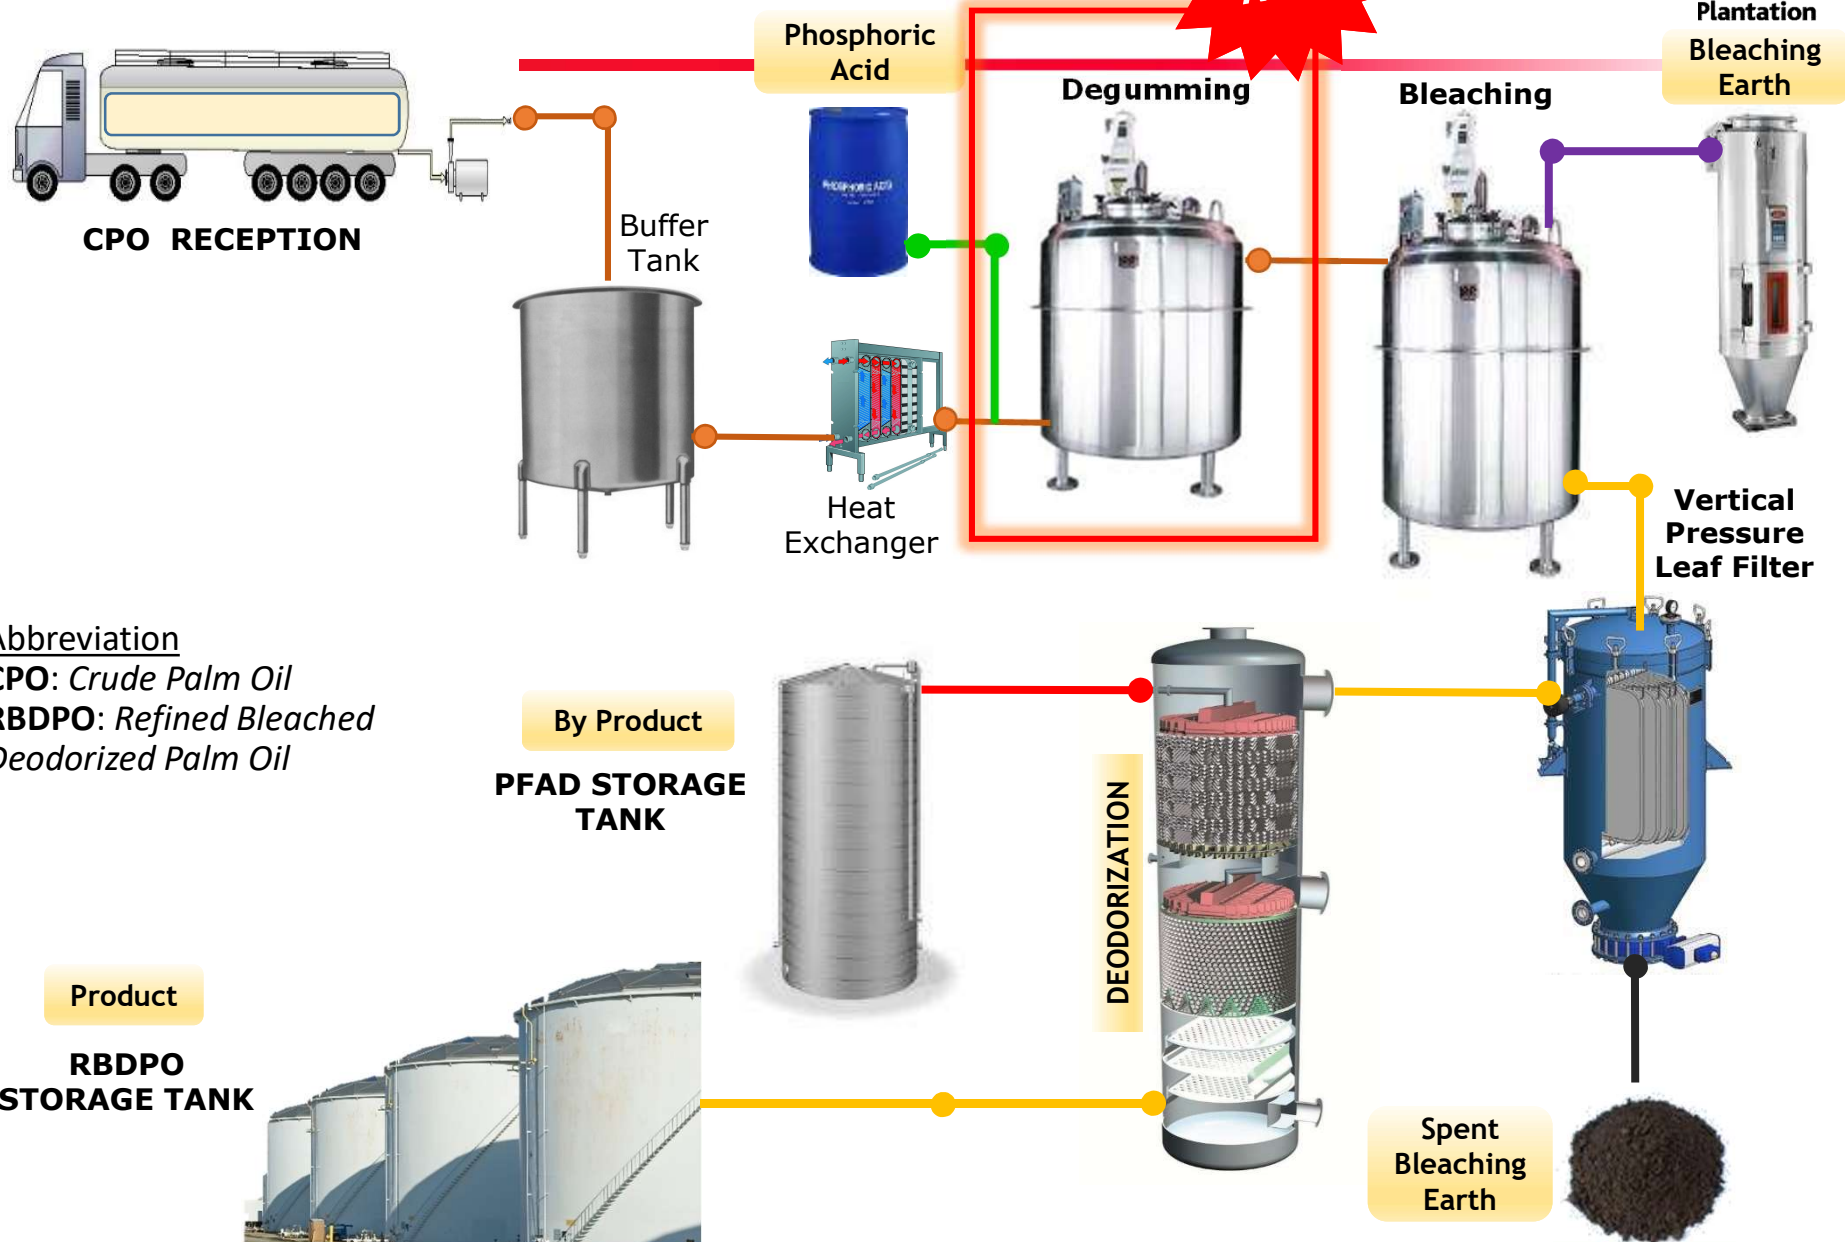

- Improve frying performance
- Reduce darkening and foaming

Refining....What is it?

Data Collection and Measurement System Analysis

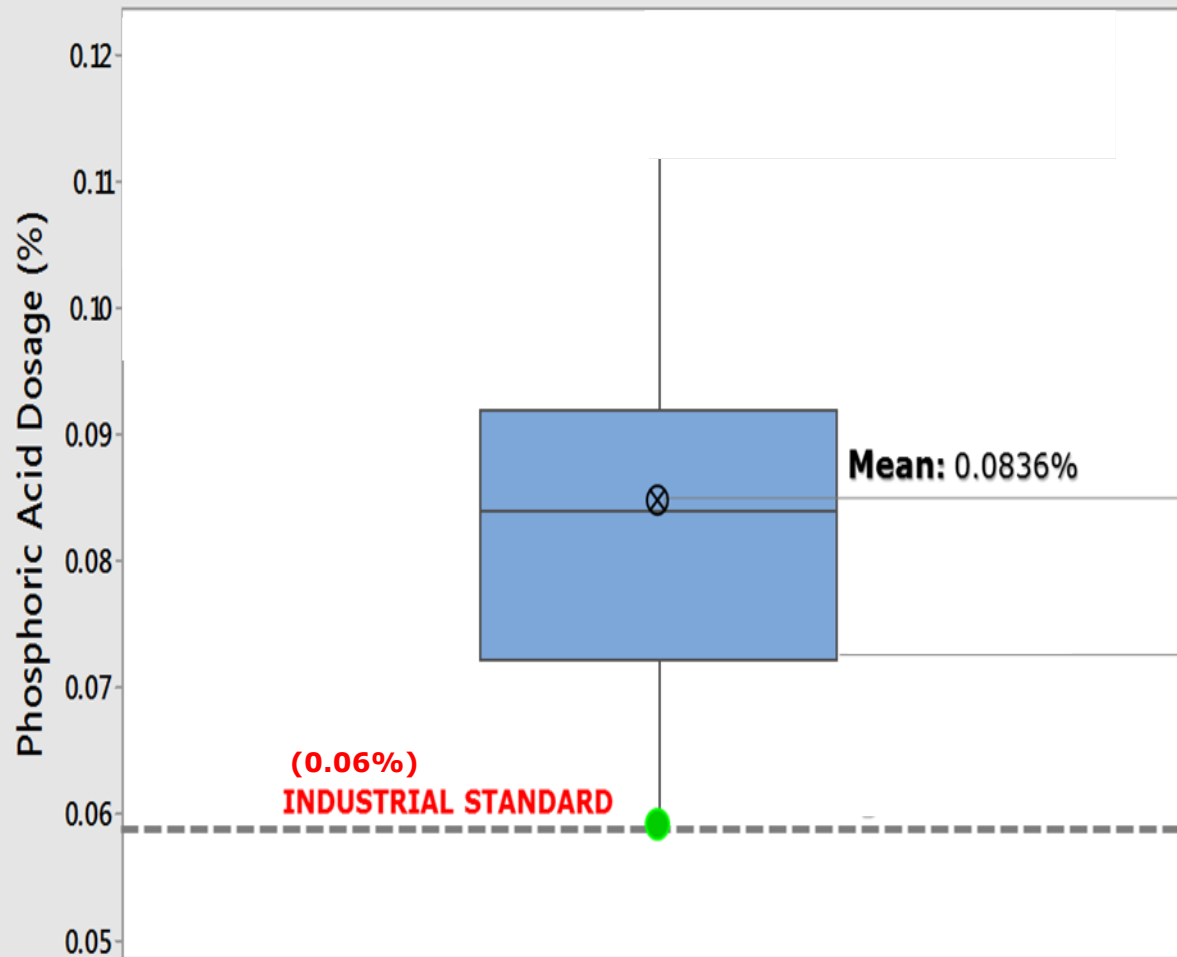

To ensure our measurement system is reliable and precise, we conduct **MSA ASSESMENT (Gage R&R)** to verify the operator's competency.

The precision of the measurement is addressed by **GAGE R&R STUDY** meanwhile the accuracy of the measurement is governed by the **CALIBRATED** gage by a **THIRD PARTY**.

Project Specific Goal

Boxplot of SDA Phosphoric Acid Dosage (%) July 2011 - May 2014

based on the potential
showed in the
preliminary study
conducted by R&D.

Process
Performance,
Mean: **0.084%**

BASELINE

Immediate target,
1st Quartile :
0.072%

Specific Goals

Stretch target is
Minimum :
0.058 %

GOAL

Gap and Improvement Area

1.2 Describe what, **WHY** & how the project was selected.

What is the Gap?

Since 2012, the *monthly average dosage* of phosphoric acid in degumming process at Austral is at **0.084%**.

There is a **GAP of 0.026%** between the **average performance compared to the best performance** achieved in previous years.

Project Specific Goal

1.4 Describe specific goals and measures based on appropriate analysis or benchmark data/ information.

90:50 Guideline Rule

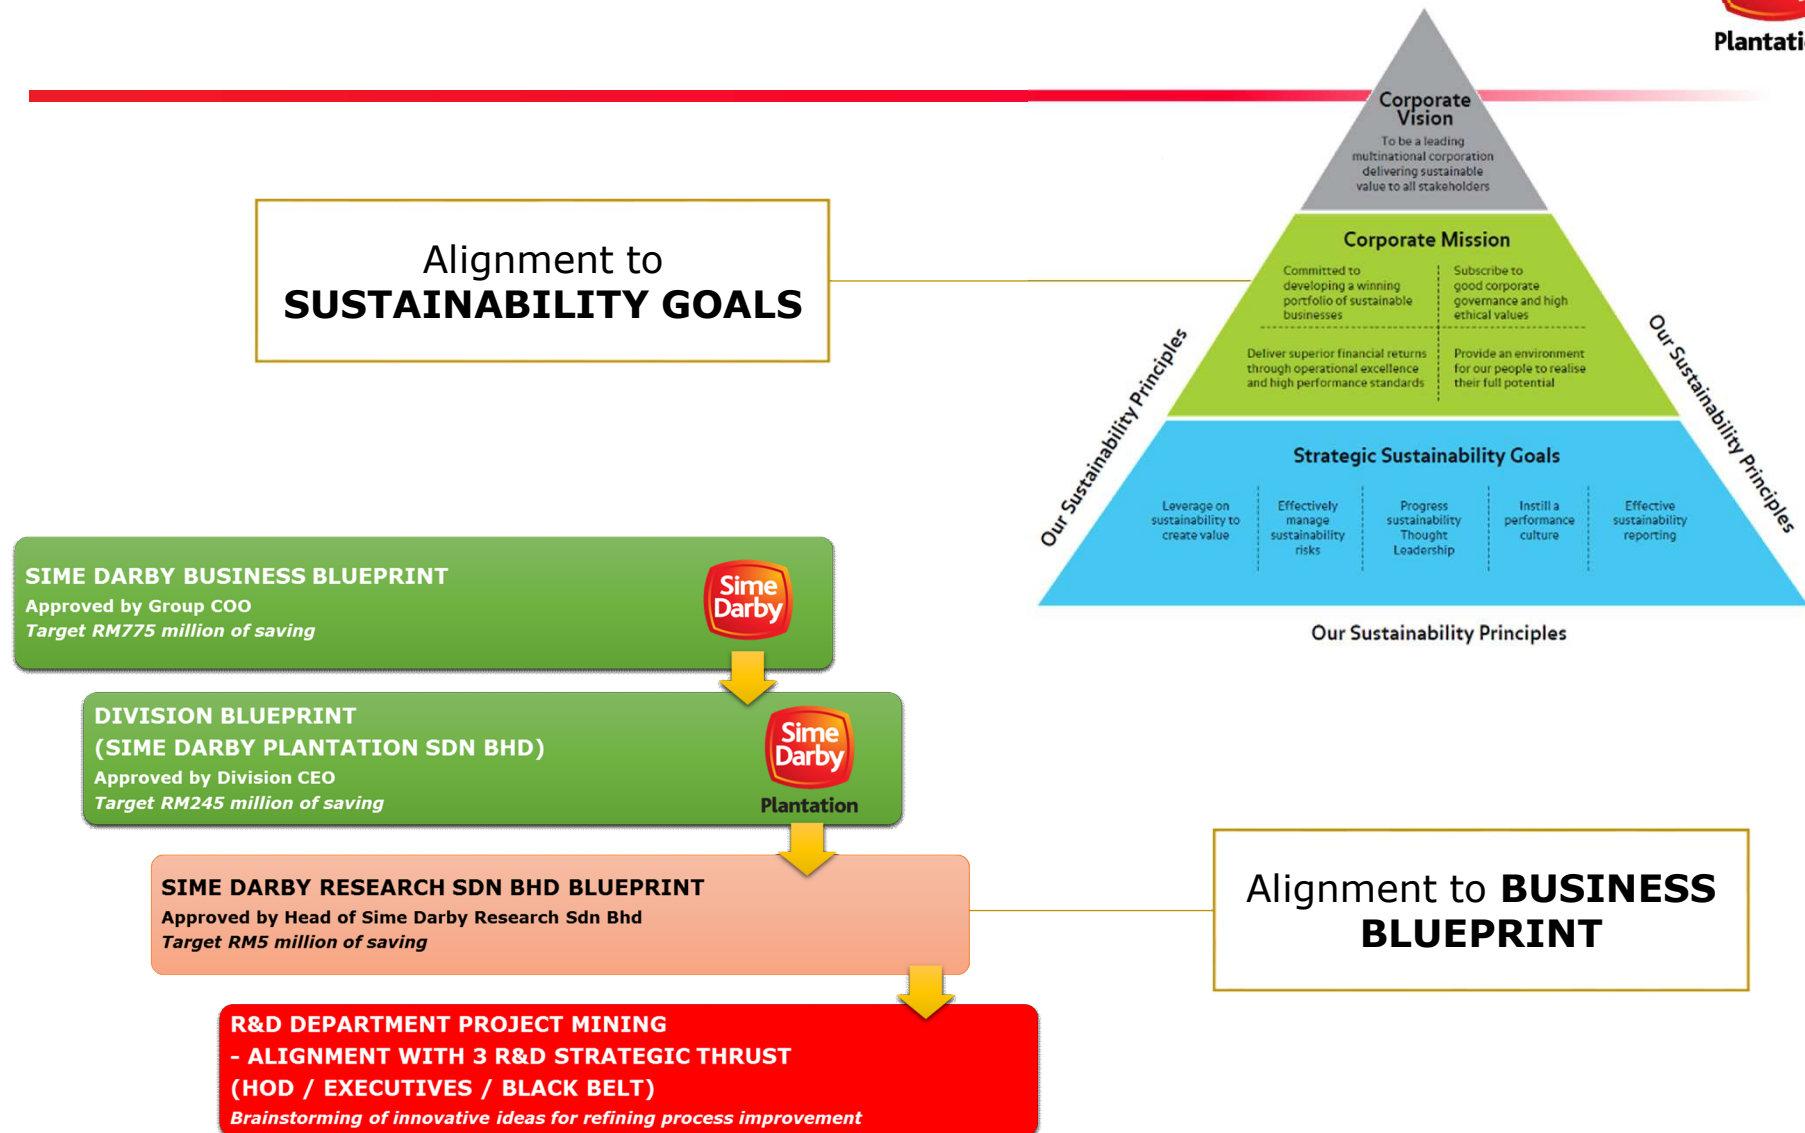

- 1) 90% Improvement when current **Sigma Level (Z) < 3** Sigma Level
- 2) 50% Improvement when current **Sigma Level (Z) ≥ 3** Sigma Level

Breakthrough Target

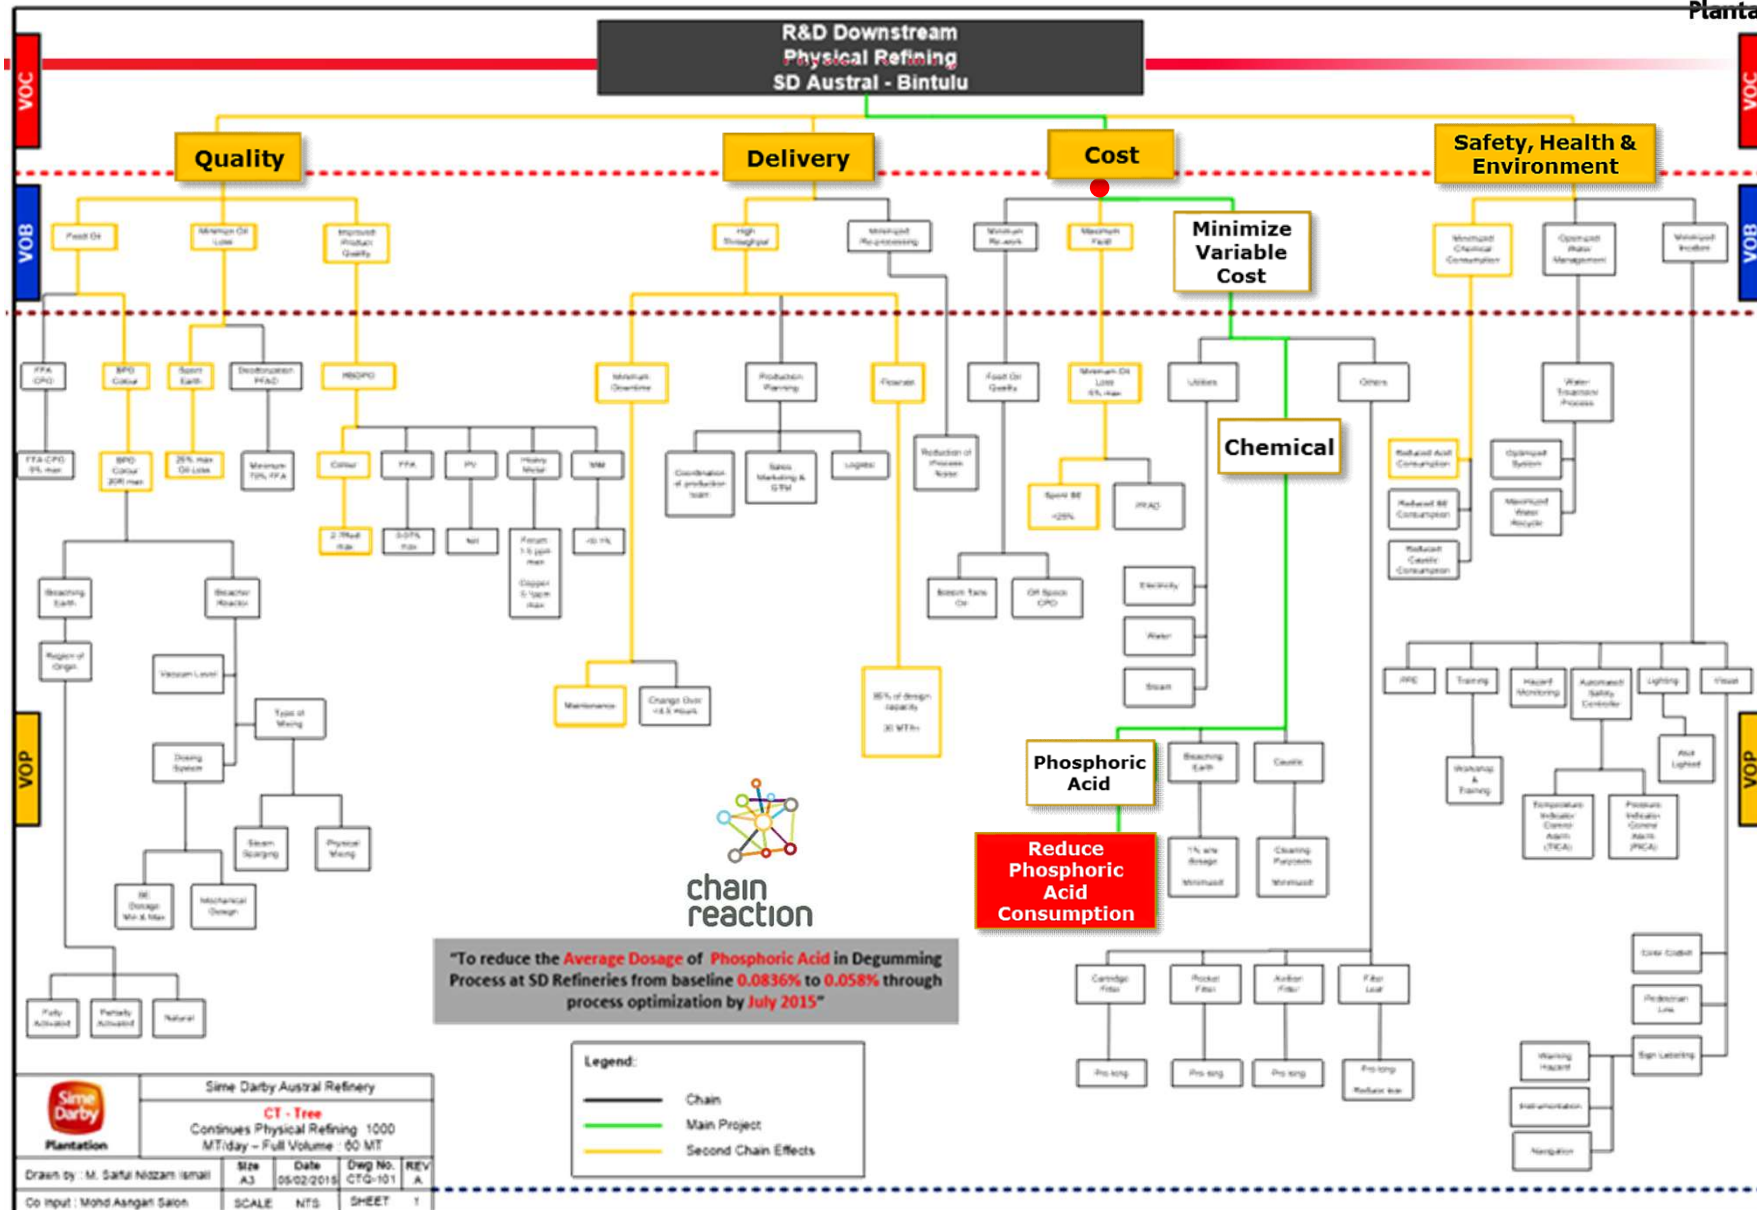

Project Selection

1.5 Explain how the project supports/aligns with the organization's goal, performance measures, and/or strategies

This project is align with Sime Darby Sustainability Goals and LSS Business Blueprint due to its financial and environmental impacts.

~~Plantation~~

Strategy in Identifying Significant Root Causes

CONCEPTUAL TOOLS

Set of **quick and useful** tools used in LSS methodology by leveraging team's **knowledge and experience**

STATISTICAL TOOLS

Set of statistical tools used to **collect, summarize, analyze, and interpret variable data** to support claim

1st Step

To Brainstorm Possible Root Causes

Tools: **Cause & Effect Diagram**

2nd Step

To Screen Possible Root Causes and Final Root Causes Identification

Tools: **Cause & Effect Matrix**

3rd Step

To Screen Possible Root Causes and Final Root Causes Identification

Tools: **Failure Mode & Effect Analysis (FMEA)**

4th Step

To Integrate Final Root Causes

Tools: **Root Cause Integration**

5th Step

Validating Final Root Causes

Tools: **Statistical Tools**

The team used **conceptual tools** to leverage on the team expertise and to speed up screening process. Finally, we used **statistical tools** to validate the significant root causes.

Root Cause Identification

CONCEPTUAL TOOLS

| Tools | | Why those Tools? | | Team Preparation |
|---|---|--|--------------------------------|---|
| Tools/Method | Diagram | Why | Result | How Team was prepared |
| Cause & Effect Matrix |  | To weigh each identified potential root cause with customers needs for the 1 st screening process | 13 Possible causes | Training attended; 1) LSS Greenbelt Workshop |
| Failure Mode and Effect Analysis (FMEA) |  | 2 nd and final screening to rate potential root causes according to severity, occurrence and detectability of failure | 11 final Root causes | 2) Process Familiarization  |
| Root Cause Integration |  | To group the final root causes with similar type | 5 final Root causes |  |

Final Root Cause Verification

2.2 Identify & verify final root causes using various methods/ tools & data gathered

5th Step

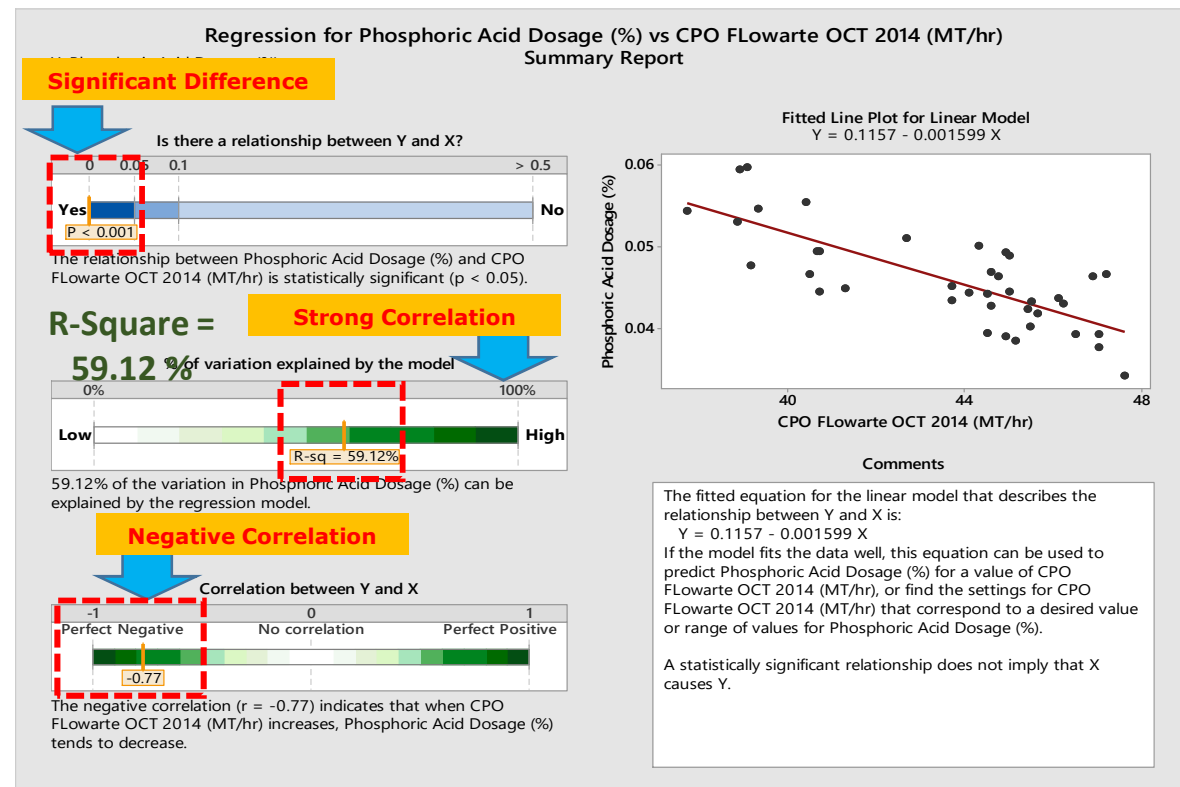

R1

OBJECTIVE

To study the effects of **various CPO Feed Flow rate (Throughput)** towards the Dosage of Phosphoric Acid induced in the process.

Findings:
From correlation analysis,
P-value = 0.001, thus
REJECT the Null hypothesis.

Correlation & Regression

Conclusion

At **CPO Feed Flow rate increase**, the dosage of **phosphoric acid reduce**.

Final Root Cause Verification

2.2 Identify & verify final root causes using various methods/ tools & data gathered

5th Step

R2

OBJECTIVE

To study the **effects of mixer** towards the phosphoric acid dosage induced in the process

Findings:

From the 2 sample T-test, the **P-Value = 0.001**. **REJECT** the null hypothesis

Comparative Method

Significant Difference

Mean Test
Is Before Mixer greater than After Mixer ?

The mean of Before Mixer is significantly greater than the mean of After Mixer ($p < 0.05$).

90% CI for the Difference
Is the entire interval above zero?

Distribution of Data
Compare the data and means of the samples.

2-Sample t Test for the Mean of Before Mixer and After Mixer Summary Report

| Statistics | Before Mixer | After Mixer |
|--------------------|------------------|--------------------|
| Sample size | 62 | 66 |
| Mean | 0.057665 | 0.023093 |
| 90% CI | (0.0545, 0.0609) | (0.02095, 0.02523) |
| Standard deviation | 0.015065 | 0.010418 |

| Statistics | *Difference |
|------------|----------------------|
| Difference | 0.034571 |
| 90% CI | (0.030750, 0.038393) |

*Difference = Before Mixer - After Mixer

Comments

H3PO4 Dosage With-Out Mixer > H3PO4 Dosage With Mixer

CONFIDENCE

Conclusion

Dosage of Phosphoric Acid was **reduced** with **introduction of mixer** will **increase reaction rate**.

Final Root Cause Verification

2.2 Identify & verify final root causes using various methods/ tools & data gathered

5th Step

R3

OBJECTIVE

To study the **effects** of the **Daily vs Hourly monitoring** towards the **phosphoric acid dosing**.

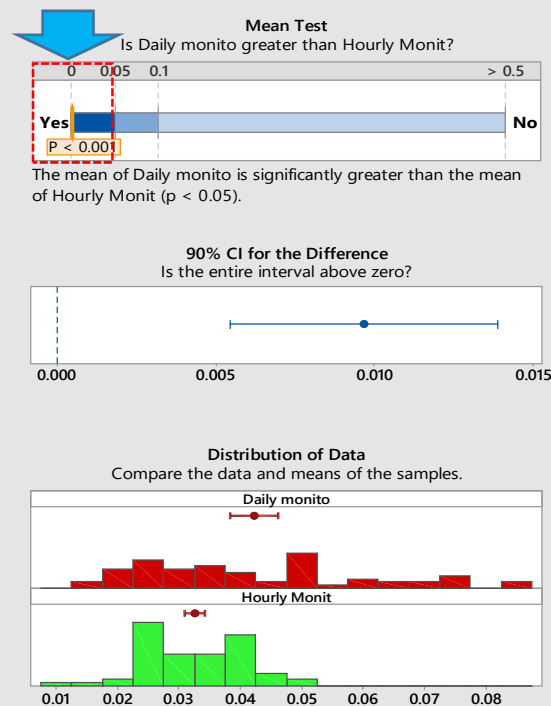

Findings:

From the 2 sample T-test, the **P-Value = 0.001**. **REJECT** the null hypothesis.

Comparative Method

Significant Difference

2-Sample t Test for the Mean of Daily monito and Hourly Monit Summary Report

| Statistics | Individual Samples Daily monito | Hourly Monit |
|--------------------|------------------------------------|--------------------|
| Sample size | 62 | 66 |
| Mean | 0.042257 | 0.032581 |
| 90% CI | (0.0383, 0.0462) | (0.03097, 0.03419) |
| Standard deviation | 0.018440 | 0.0078430 |

| Statistics | Difference Between Samples | *Difference |
|------------|----------------------------|-----------------------|
| Difference | | 0.0096766 |
| 90% CI | | (0.0054619, 0.013891) |

*Difference = Daily monito - Hourly Monit

Comments

- Test: You can conclude that the mean of Daily monito is greater than Hourly Monit at the 0.05 level of significance.
- CI: Quantifies the uncertainty associated with estimating the difference in means from sample data. You can be 90% confident that the true difference is between 0.0054619 and 0.013891, and 95% confident that it is greater than 0.0054619.
- Distribution of Data: Compare the location and means of samples. Look for unusual data before interpreting the results of the test.

H3PO4 Average Dosage

Daily Monitoring

>

H3PO4 Average Dosage

Hourly Monitoring

Conclusion

Dosage of Phosphoric Acid was **reduced** with **introduction of hourly monitoring** due to increase of adjustment frequent.

Final Root Cause Verification

2.2 Identify & verify final root causes using various methods/ tools & data gathered

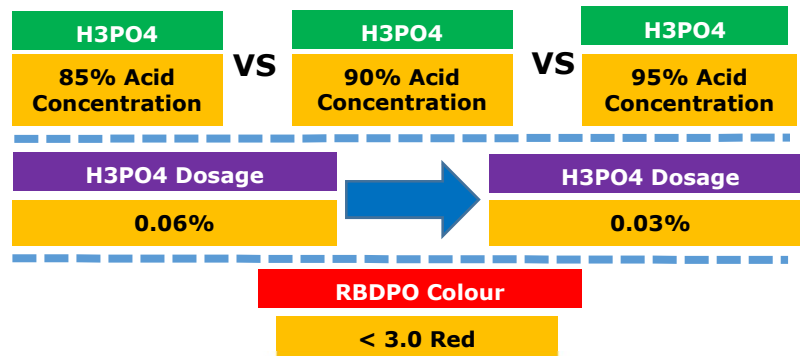

5th Step

R4

Interaction Plot

OBJECTIVE

To evaluate how **Phosphoric Acid Concentration** (80%, 90% & 95%) affects the Dosage of Phosphoric Acid and RBDPO Colour (Quality)

Findings:

90% phosphoric acid concentration gives the **lowest dosage** with **lowest RBDPO colour**.

Conclusion

90% phosphoric acid concentration is the **most suitable concentration**, compared to current 85% concentration.

Final Root Cause Verification

2.2 Identify & verify final root causes using various methods/ tools & data gathered

5th Step

R4

OBJECTIVE

To compare the effects of the 85% and 90% **Phosphoric Acid Concentration** towards the Dosage of Phosphoric Acid.

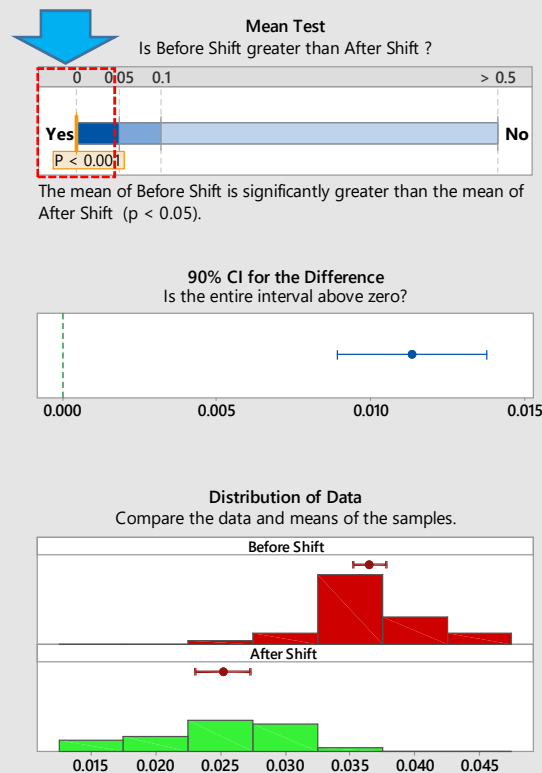

Findings:

From the 2 sample T-test, the **P-Value = 0.001**. **REJECT** the null hypothesis.

Comparative Method

Significant Difference

2-Sample t Test for the Mean of Before Shift and After Shift Summary Report

| Statistics | Before Shift | After Shift |
|--------------------|------------------|--------------------|
| Sample size | 32 | 23 |
| Mean | 0.0365 | 0.025174 |
| 90% CI | (0.0352, 0.0378) | (0.02307, 0.02728) |
| Standard deviation | 0.0042955 | 0.0058748 |

| Statistics | *Difference |
|------------|-----------------------|
| Difference | 0.011326 |
| 90% CI | (0.0088962, 0.013756) |

*Difference = Before Shift - After Shift

Comments

- Test: You can conclude that the mean of Before Shift is greater than After Shift at the 0.05 level of significance.
- CI: Quantifies the uncertainty associated with estimating the difference in means from sample data. You can be 90% confident that the true difference is between 0.0088962 and 0.013756, and 95% confident that it is greater than 0.0088962.
- Distribution of Data: Compare the location and means of samples. Look for unusual data before interpreting the results of the test.

H3PO4 Dosage
85% concentration

>

H3PO4 Dosage
90% concentration

CONFIDENCE

Conclusion

Dosage of Phosphoric Acid was **reduced** with new **introduction of 90% phosphoric acid** concentration.

Final Root Cause Verification

2.2 Identify & verify final root causes using various methods/ tools & data gathered

5th Step

R5

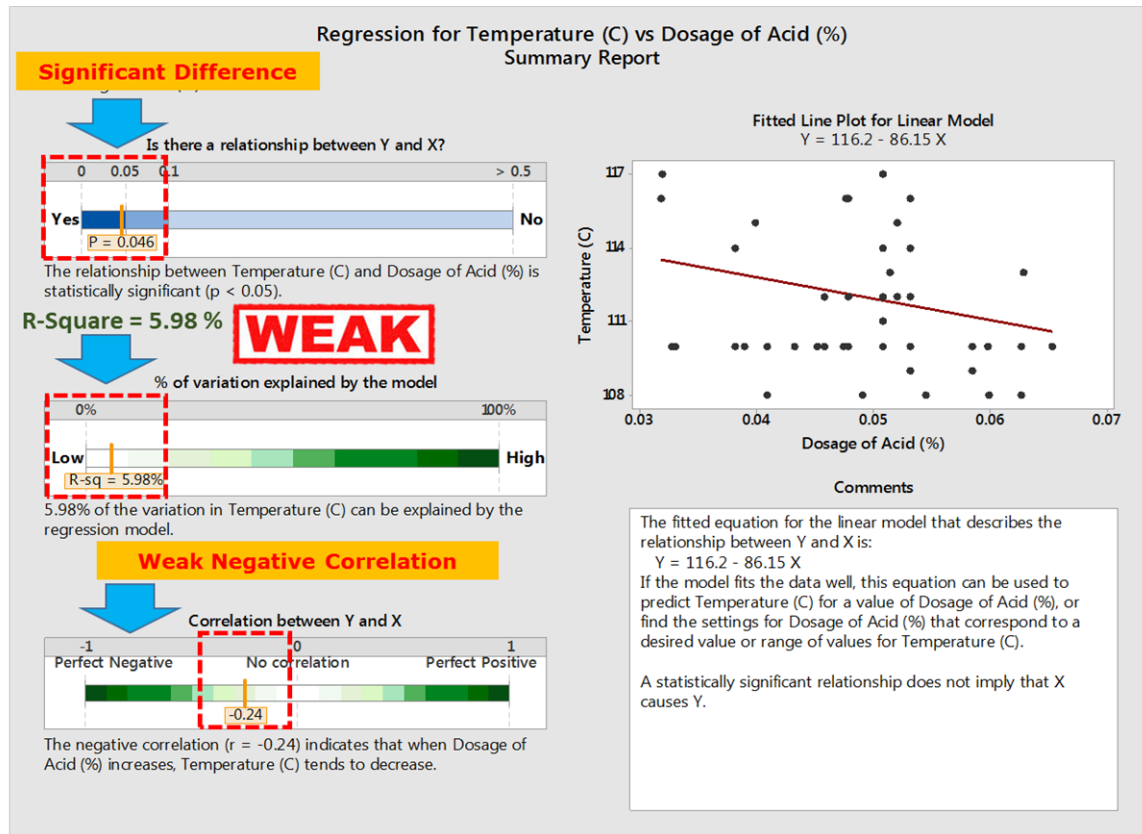

Correlation & Regression

OBJECTIVE

To study the effects of **Degumming Temperature** towards the Dosage of Phosphoric Acid.

Findings:

From the correlation analysis, the **P-Value = 0.046**. However, the correlation between the factors are very weak with R-Square of **5.98%**.

Conclusion

Dosage of Phosphoric Acid **was reduced** with **higher Temperature of degumming process**.

Root Cause Validation

STATISTICAL TOOLS

Summary Of Final Root Causes Analysis

Root Cause Validation Evidence

| Pro. | Final Root Cause/ Improvement Opportunities | Validation method | Evidence |
|------|--|--|---|
| R1 | Low feed flow rate | Correlation & Regression | P-Value = 0.001, R-Square of 59.12%. |
| R2 | Low reaction rate | Comparative Method | P-Value = 0.001. |
| R3 | Low frequency of monitoring | 1. Comparative Method 2. Correlation & Regression | P-Value = 0.001. |
| R4 | Low concentration of phosphoric acid | Comparative method | P-Value = 0.001. |
| R5 | Inconsistent temperature | Correlation & Regression | R-Square of 5.98%. |

Validated

| Root cause Analysis | Symbol | Statistical Method | Summary | KPIV Validation |
|---|--------|--|--|-------------------------|
| Feed flowrate | R1 | Correlation & Regression | <ul style="list-style-type: none"> From the Regression Analysis, the P-Value = 0.001. Significant Difference Strong Relationship However, the correlation between the factors are very Strong with R-Square of 59.12%. | VALIDATED STRONG |
| Reaction rate @ Mixing rate | R2 | Comparative Method | <ul style="list-style-type: none"> From the 2 sample T-test, the P-Value = 0.001. Significant Difference | VALIDATED |
| Design of Phosphoric Dosing system Frequency of monitoring Daily vs Hourly | R3 | Comparative Method | <ul style="list-style-type: none"> From Control Chart (IMR Chart) there are region for the variance have been reduce by changing the monitoring from daily to hourly. | Concentration of Phosphoric Acid 85%, 90% and 95% | R4 | Interactional Plot Comparative Method | <ul style="list-style-type: none"> From the Interactional Plot there are region for potential process optimization. From the 2 sample T-test, the P-Value = 0.001. Significant Difference | VALIDATED |
| Temperature | R5 | Correlation & Regression | <ul style="list-style-type: none"> From the Regression Analysis, the P-Value = 0.046. Significant Difference Weak Relationship However, the correlation between the factors are very weak with R-Square of 5.98%. | VALIDATED WEAK |

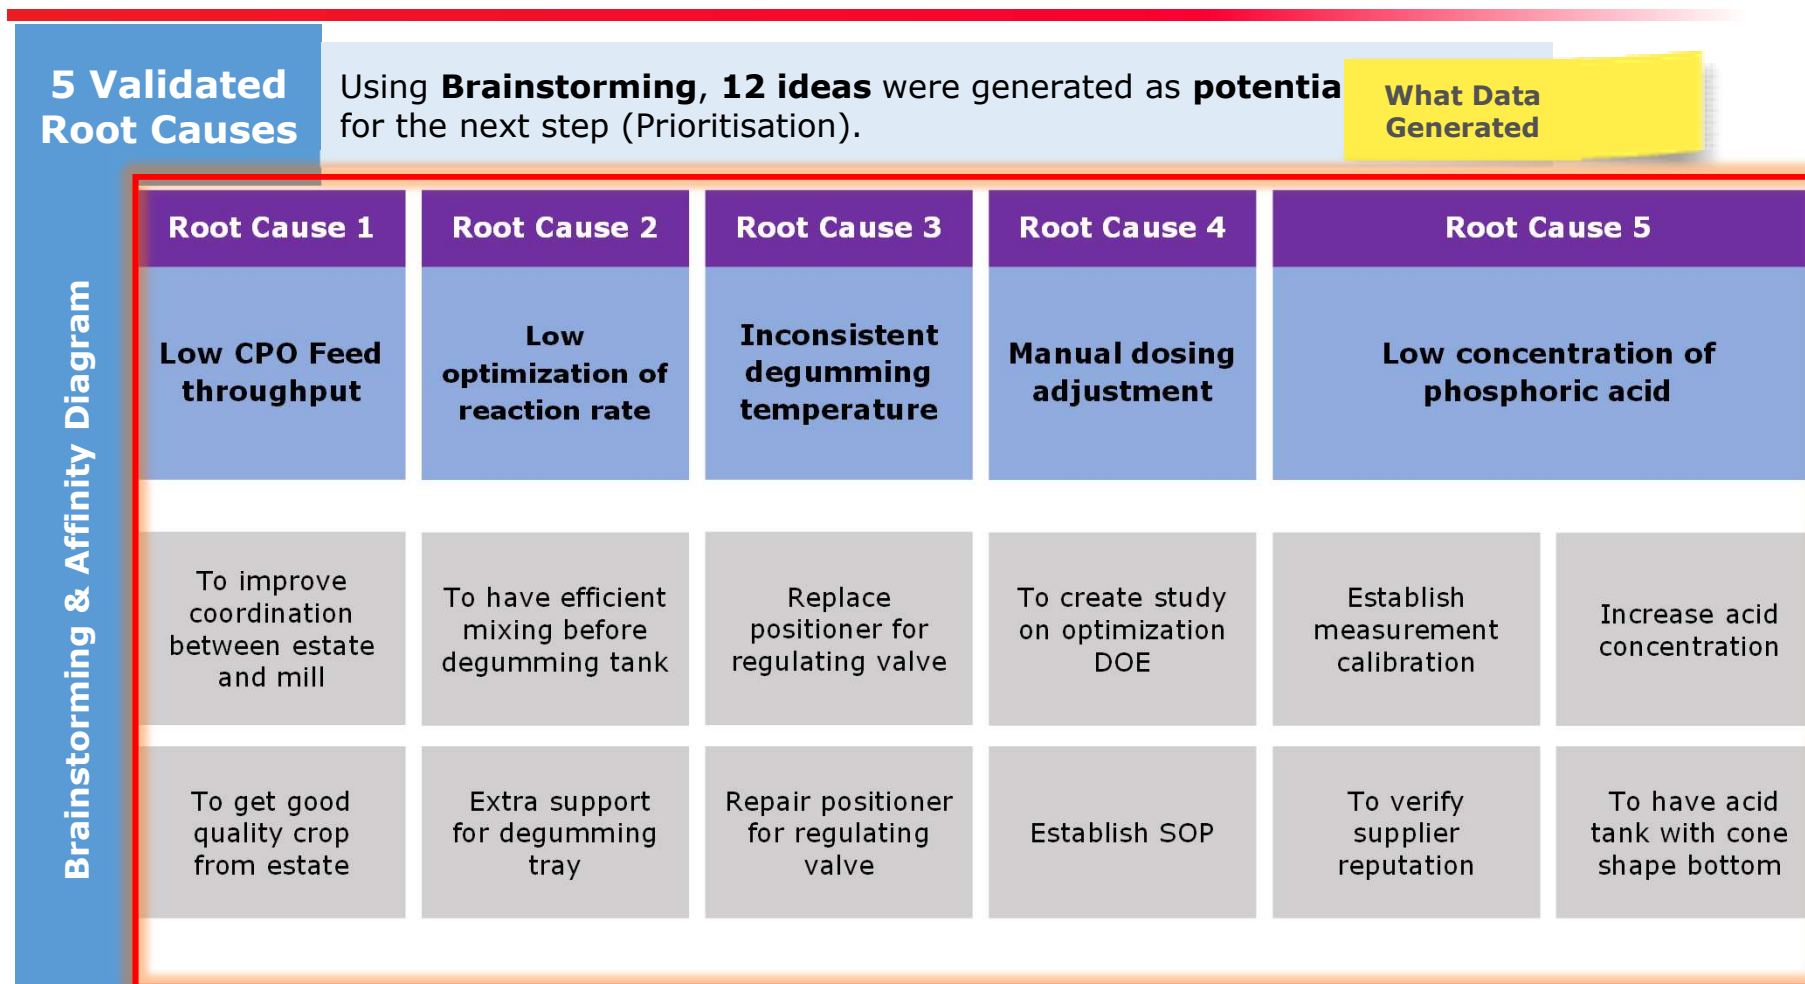

The first 5 root causes have significant impact on the phosphoric acid consumption.

Plantation

Improvement & Optimization

Possible Solutions or Improvements

12 ideas generated from Brainstorming were based on the team members experience and knowledge in the related field. Data were **analyzed using Affinity Diagram** and **Benchmarking activities**.

Possible Solutions or Improvements

What Data Were Generated (Example)?

Root Cause 2

Low optimization of reaction rate

To have efficient mixing before degumming tank

Extra support for degumming tray

What Data Generated

Facts

Comparison with other Refineries (Benchmarking) found that *low reaction rate* between the Phosphoric Acid and Gums cause the high consumption of acid in Sime Darby Austral.

Roots Cause

In sufficient mixing and collapsed degumming tray inside the reactor.

How is Data Analyzed?

Tools

"Brainstorming & Affinity Diagram"
"Benchmarking"
"Expert Opinion"

Improvement Idea

Install High Shear Mixer Rectification Degumming Reactor

High Shear In-Line Mixers

Silverson High Shear In-Line mixers are supremely efficient and rapid in operation and are capable of reducing mixing times by up to 90%. The action of any Silverson In-Line mixer can be modified with the use of rapidly interchangeable workheads. This enables any machine to mix, emulsify, homogenize, solubilize, suspend, disperse and disintegrate solids.

Features:

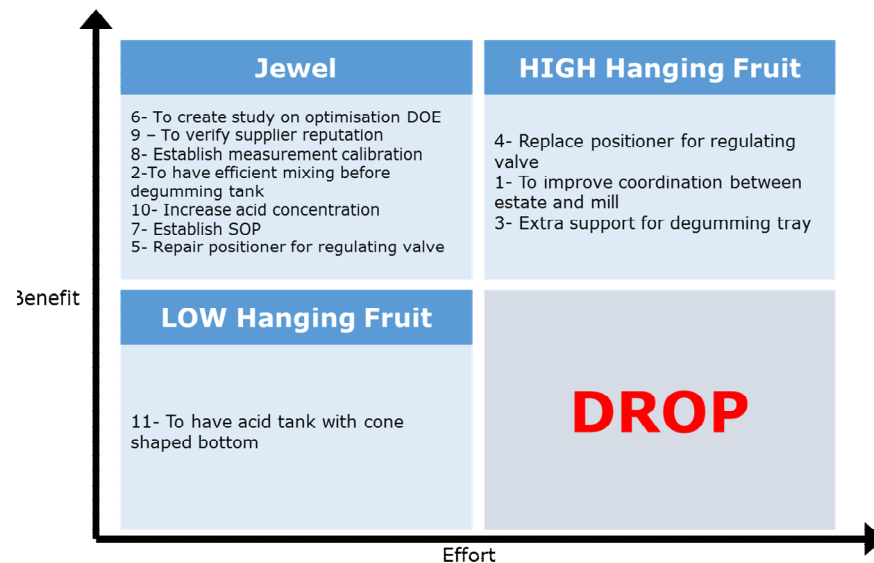

- Aeration free
- Self-pumping
- No bypassing
- Interchangeable workheads
- Sanitary construction
- Easy maintenance
- Lower power requirements
- Eliminates agglomerates and fish eyes
- Creates stable emulsions and suspensions
- Reduces particle size
- Rapidly dissolves solids
- Accelerates reactions

I-MR Chart of CPO Processed by Stage

Mann-Whitney Test and CI: CPO Processed_After, CPO Processed_Before

| | N | Median |
|----------------------|-----|--------|
| CPO Processed_After | 117 | 911.93 |
| CPO Processed_Before | 342 | 749.88 |

Point estimate for $\eta_1 - \eta_2$ is 108.74
95.0 Percent CI for $\eta_1 - \eta_2$ is (90.43, 133.95)
W = 37491.0
Test of $\eta_1 = \eta_2$ vs $\eta_1 \neq \eta_2$ is significant at 0.0000

Both Austral and GTM have recorded increase

Sime Darby Austral Processing Layout

Harvesting benefits calculation

Harvesting?

Phosphoric Acid

Reduction of Phosphoric Acid consumption :

= Daily SAP CPO Processed x (Current average Monthly dosage – Baseline dosage) x (Phosphoric acid price per tonne)

= Daily SAP CPO Processed x (Current average Monthly dosage – **0.0835%**) x (**RM 3600 per tonne**)

Additional Profit Margin

Additional Olein :

= (Daily SAP CPO Processed – Baseline SAP CPO processed Apr, May & June 14) x (Minimum Refinery Efficiency) x (Monthly average performance fractionation F1 & F2 combined) x (Minimum Fractionation Yield) x (GTM Olein sales price – (Average CPO price for the months + SDA Processing Cost))

= (Daily SAP CPO Processed – **749.88 MT/Day**) x (**94.886%**) x (Monthly average performance fractionation F1 & F2 combined) x (**75.254%**) x (GTM Olein sales price – (Average CPO price for the months + **RM 135**))

Additional Stearin :

= (Daily SAP CPO Processed – Baseline SAP CPO processed Apr, May & June 14) x (Minimum Refinery Efficiency) x (Monthly average performance fractionation F1 & F2 combined) x (1- Minimum Fractionation Yield) x (GTM Stearin sales price – (Average CPO price for the months + SDA Processing Cost))

= (Daily SAP CPO Processed – **749.88 MT/Day**) x (**94.886%**) x (Monthly average performance fractionation F1 & F2 combined) x (1- **75.254%**) x (GTM Stearin sales price – (Average CPO price for the months + **RM 135**))

The calculation have been discussed and agreed by **SD Austral, PSQM , GSQM, GTM and R&D.**

Project Result

| | Indicator | Baseline | Target | | Result | Potential Benefit at Closure |
|------------|--|---|------------------|-------------------|------------------|------------------------------|
| Tangible | Acid Dosage | 0.084% | 0.058% | COMPARE | 0.035% | RM527,903 /year |
| | Bleaching Earth Dosage | 1.014% | 0.800% | | 0.70% | RM862,368 /year |
| | Throughput (Profit Margin) | 749.88 tonne/day | 850.00 tonne/day | | 911.93 tonne/day | RM2,234,548 /year |
| Intangible | Satisfied & delighted customers and stakeholders | Enculturation of improvement & performance oriented | | Total LSS Benefit | | RM 3,624,819 /year |
| | Greener products and better image of company | | | Total Profit | | RM1,153,346 up to Jan 16 |

Conclusion:

Based on **results obtained at closure**, the **Potential Benefits at Closure** has **increased significantly** (compared to Potential Benefits at Initial).

kualiti produk menerusi pembuangan sisa, kecacatan dan kesilapan. Ketua Kecemerlangan Operasi Sime Darby, Azman Shah Mohamed Noor, berkata dalam tempoh tiga tahun pelaksanaan program itu, pihaknya sudah mencatatkan jumlah manfaat lebih RM400 juta.

Penjimatan kewangan

Sime Darby Bhd optimis mampu mencapai sasaran untuk meraih jumlah manfaat terkumpul RM775 juta menjelang tahun kewangan 2016/2017 menerusi pelaksanaan program Lean Six Sigma (LSS). Program yang diperkenalkan konglomerat itu pada 2013 adalah strategi pengurusan perniagaan untuk meningkatkan pendapatan, mengurangkan kos dan meningkatkan

tanya selepas majlis penyerahan bendera Malaysia kepada Pasukan Sime Darby dikenali Carey Owl Knights di Kuala Lumpur, semalam.

Pasukan itu akan mewakili Malaysia di Pertandingan Anugerah Pasukan Antarabangsa Cemerlang (ITEA) ASQ 2016 yang diadakan sempena Persidangan Dunia mengenai Kualiti dan Kemajuan (WCQD) di Wisconsin, Amerika Syarikat, bermula 16 hingga 18 Mei ini.

Pada majlis itu, turut diadakan penyampaian Anugerah Juara Industri bagi Produktiviti, Syarikat Berkaitan Kerajaan (GLC) kepada Sime Darby oleh Perbadanan Produktiviti Malaysia (MPC) serta penyampaian penghargaan kepada Azman Shah berikutan sumbangan beliau terhadap pembentukan Pelan Hala Tuju Produktiviti Nasional.

Sime Darby 3P Policy

Future

SD Sustainability is a company's commitment to operate in an **economically, socially and environmentally** sustainable manner whilst balancing the interests of a diverse range of stakeholders – holistic.

Lower chemical
consumption

Lower waste
generation

Lower CO₂ footprint

Greener product

Better quality oil

Better oil stability

Lower oil
contaminant

Higher customer
confidence on product

Lower processing cost

Higher profit

Provide product
superiority

Sustainable business

This project also impacted and created value to stakeholders by upholding **Sime Darby's 3P Policy** which displays Sime Darby's **commitment** to operate in an economically, environmentally and socially sustainable manner whilst balancing the interests of a **diverse range of stakeholders**.
