

REWARDS AND BENEFITS

Join our diverse and global profession and benefit from:

- the potential to help create a sustainable planet
- career variety and exciting challenges
- opportunities for travel
- competitive starting salaries
- professional status

"I was introduced to chemical engineering by my school chemistry teacher... I enjoyed maths and sciences at school and wanted a course that would use these subjects in a practical way. I did some research and knew it was the right course for me.

The diversity of the subject was one of the main aspects that attracted me, with possible careers in fields as diverse as oil and gas, pharmaceuticals, nuclear and food processing to name a few, being an important factor for me."

Will Senior, Senior Process Engineer, Atkins
