

Chemical engineers will...

Support access to medicine, food and water for developing countries

Explore methods to recycle plastics efficiently

Research solutions to produce more food using less land, water and energy

Take medicine from a lab and produce it at scale

Treat water sources and deliver it to our taps

Work with other disciplines to create a sustainable environment

Develop ways to store clean energy sustainably

Reduce carbon emissions to transition to net zero by 2050

Optimise processes and recycling to reduce waste products

Find sustainable alternatives to fossil fuels to maintain our ecosystem

Will you?
